Medium-Fidelity Prototype

Taskko — Your AI Productivity Companion

Umar Ahad Uddin Ahmed Usmani (SAP 60199)

Muhammad Sharjeel (SAP 59385)

Riphah International University, Lahore · 20 June 2026

WHAT IS TASKKO?

One app for the student productivity loop

1

AI goal breakdown

Hand Tako an overwhelming goal;
Gemini turns it into bite-sized,
editable tasks you can actually start.

2

Gamification

Points, ranks, daily streaks, shields
and milestone badges turn
progress into a motivating loop.

3

Social + AI companion

A squad leaderboard, shareable
report cards, and Tako — an AI
buddy for nudges and support.

Taskko targets the student productivity crisis — overwhelming goals, no accountability, no motivation loop, and burnout — with one fast, motivating, low-fatigue loop.

THE MAIN TASKS

Four user tasks — we prototyped the full signature flow

T1

Get set up

Understand the value & create an account.

[Splash](#) • [Onboarding](#) • [Sign up](#)

T2

Plan a goal with AI

Type a goal; get an editable, bite-sized plan.

[AI Plan Studio](#)

T3

Do focused work

Pick a mood, run a focus session, complete tasks.

[Home](#) • [Focus](#)

T4

Stay motivated

Badges, squad, report card, share + Tako chat.

[Hub](#) • [Tako](#)

Signature task prototyped end-to-end: *"From an overwhelming goal to a started, completed and rewarded study session."*

From paper sketches to an interactive prototype

Our Fidelity Process

How Taskko's screens evolved from paper sketches to an interactive Figma prototype

01 Low fidelity

Paper / grayscale wireframes

Layout, content blocks & screen count.
No colour, no real components.

1

02 Medium fidelity

Structured digital wireframes

Real grid, component system, states,
navigation & clickable links.

2

03 High fidelity

Branded, interactive prototype

Design tokens, type, mascot, motion —
the shared Figma prototype.

3

The signature task, wired end-to-end in the prototype

Taskko — Complete Task Flow

Signature task: turn an overwhelming goal into a started, completed and rewarded study session

Global structural decisions, applied to every screen

Consistent grid & spacing

402-px frame, 8/12/16 scale, 20–28-px bento radii.

Reusable component system

Shared buttons, inputs, cards, task rows, chips, tab bar.

Persistent bottom navigation

Home · Plan · Hub · Tako always visible.

System-state screens

Loading, empty, error/retry and success feedback added.

Realistic content

Real copy replaces lorem to test true layout & overflow.

Interactive links

Click links between frames — sketches become navigable.

Onboarding

LOW-FIDELITY WIREFRAME

PROTOTYPE SCREEN

WHAT CHANGED

- One welcome panel → a 3-slide value tour (Plan / Streaks / Squad)
- Animated 1/3 dot indicator and a persistent Skip control
- Next → Get started; both routes lead into Sign up

Why it matters: *Progressive disclosure · user control & freedom*

PROTOTYPE SCREEN

WHAT CHANGED

- Google / Apple SSO moved above the fold to cut friction
- Required Terms checkbox keeps the CTA disabled until valid
- Inline validation, password show/hide, Login cross-link

Why it matters: *Error prevention · constraints · affordance*

Home dashboard

LOW-FIDELITY WIREFRAME

PROTOTYPE SCREEN

WHAT CHANGED

- Flat task list → a grouped bento dashboard
- Streak & Rank cards with live numbers + progress bars
- Mood check-in and a "Next up" hero CTA (Start now)

Why it matters: *Bridges the Gulf of Evaluation & Execution · Gestalt*

AI Plan Studio

LOW-FIDELITY WIREFRAME

PROTOTYPE SCREEN

WHAT CHANGED

- Added a 3-step header: Goal → Break down → Customize
- Editable AI rows: edit / add / delete / regenerate
- Per-task time + points · Commit-to-Today · AI loading state

Why it matters: *Visibility of status · user control over the AI*

Gamification Hub

LOW-FIDELITY WIREFRAME

PROTOTYPE SCREEN

WHAT CHANGED

- One badges grid → 3 tabs (Badges / Squad / Report card)
- Clear locked vs unlocked badges + a "New badge!" highlight
- One-tap Share to the system sheet for accountability

Why it matters: *Feedback & reward · recognition over recall*

Every change maps to a usability principle

Visibility of system status

Streak/rank cards, 3-step Plan progress, AI loading state.

Bridge the Gulf of Execution

"Next up" hero CTA makes starting the next task effortless.

Bridge the Gulf of Evaluation

Numbers + progress bars make status readable at a glance.

Constraints & error prevention

Disabled CTA, Terms gate, inline validation on sign-up.

Gestalt grouping

Bento cards group related stats & tasks, reducing overwhelm.

User control & freedom

Editable AI plan, persistent Skip, regenerate.

The complete flow, screen by screen

1 · Onboard

2 · Sign up

3 · Home

4 · AI Plan

5 · Reward

↑ Tako

TOOLS BESIDES FIGMA

What we used, why, and the trade-offs

Tool	Why we used it	Pros	Cons
Claude (Claude Design)	Generated the UI concept, low-fi wireframes, this report & deck.	Fast iteration; design+code+docs together; token-consistent.	Needs human review; not pixel-precise; can hallucinate.
HTML / CSS + Chrome	Rendered pixel-accurate screen frames for handoff.	Real fonts/CSS; exact control; free; reusable in the build.	Needs coding; no drag-drop or comments; slower mock-ups.
Python (Pillow/pptx/docx)	Scripted wireframes, diagrams, the report & this deck.	Repeatable; precise; free; regenerate from source fast.	Code-first, not WYSIWYG; manual layout tuning.
Google Fonts	Manrope / Fraunces / JetBrains Mono type system.	Free, open-licensed, high quality, many weights.	Embed for offline; load weight; attribution needed.
Microsoft Office	Final .docx / .pptx submission formats.	Universally accepted; easy edit; reliable PDF export.	Proprietary; less design control; formatting can drift.
Git & GitHub	Version control & backup for assets and docs.	History & rollback; backup; easy collaboration; free.	Learning curve; binary assets don't diff; conflicts.

SHARE THE PROTOTYPE

The interactive Figma prototype

All 8 phone screens + the admin portal, with the main task flow wired as clickable links — open the file and press Present (▶) to play it end-to-end.

<https://www.figma.com/design/Xa83tCHsfbzluGEJft8zAz/Taskko-%E2%80%94-App-Design>

Tip:

set the link to “Anyone with the link · can view” so evaluators open it without an account.
